

Hard of Hearing individuals in Utah envision a future when their T-coil hearing aids and cochlear implants can serve as assistive listening devices, delivering discreet, clear personalized sound inside their ears. They can envision going to their places of worship, community theaters, auditoriums, businesses, museums, or any public assembly area and be accommodated for their hearing loss so that they can have the full rich experiences they deserve. Join the movement and make a difference for yourself, your loved ones, your friends, your co-workers, and your community.
